IT Hardware

Frontier Computer is the worldwide source for new and refurbished IT hardware from full servers to EOL parts and even hard to find parts. Our 37,000 square foot warehouse holds more than 100,000 servers, drives, and networking products. All the hardware shipped from our technical center undergoes rigorous testing and has passed the certification.

We ship 99.6% of our products the same day—to over 140 countries and all 50 U.S.

States. Our logistics team use state-of-the-art packaging and a four-step verification process to ensure we ship the correct parts to the correct address at the least expensive rate. We guarantee your order will arrive at your location in the same high quality, perfectly functioning condition as when it left our facilities.

Service and Maintenance

Since we work every day with a range of products from multiple vendors, Frontier has exactly the service technicians you need to keep your systems up and running. We can create a custom maintenance plan for a fraction of your OEM contract costs. Because of our extensive equipment warehouse, we also have critical replacement parts even after manufacturers stop supplying them.

Enterprise Solutions

Our experts can provide a fully integrated solution or help you plan your deployment. From a single configured system to a complete turnkey solution, we can help with hardware, software, and installation.

- Systems Integration
- Mobile Wi-Fi & Connectivity
- Cloud Computing
- Virtualization
- Software Defined Wide Area Networks
- Data Protection and Security
- Disaster Recovery
